Based on rat inhalation studies of dust, IARC concluded that there is "sufficient evidence in experimental animals for the carcinogenicity of carbon black", resulting in their classifying carbon black as "possibly carcinogenic to humans (Group 2B)". This classification is solely based on inhalation of the raw dust which cannot happen in the normal use of this product.

The carbon black in this mixture is bound within the fluid matrix reducing its chances of causing harm.

Comment - "carbon black (airborne, unbound particles of respirable size)" is a California Proposition 65 listed substance. Please note that all three listing qualifiers (airborne, unbound (not bound within a matrix), and respirable size (10micron or less in diameter)) must be met for this substance to be considered a Proposition 65 substance. This carbon is bound within this

ink matrix reducing its chances of causing harm.)
